

Teacher Review – Anastasia

I really appreciate Anastasia's teaching and the way she encourages a strong push for python programming. While Python was not a big focus in our Level 5 BCS course, I believe the way it's being taught now is much better.

Anastasia has an obvious love for teaching and has a great way of sharing her knowledge with us and doesn't mind helping out if your struggling with something.

One area where Anastasia stood out for me was her taking our Advanced Maths class, teaching us using python and python libraries (e.g. NumPy, SymPy), that was extremely helpful and made working out tricky mathematical computations a lot easier and understandable, plus in the future working with tech, we are more likely to use NumPy to solve maths problems than pen and paper.

Anastasia's dedication to teaching and move toward more python-based learning has been great, and I hope to see more integration of Python in future courses under her guidance.
