Mrs. Anastasia Mozhaeva
Eastern Institute of Technology

Dear Mrs. Mozhaeva:

This is a support letter for the project "Human Vision Based Technology for Real-Time Processing of Wide-Angle Aerospace Video Signals".

National Marine Pacific is keen to support the development of new technology that enables the use of drones equipped with wide-angle panoramic capabilities, allowing for real-time data analysis of 360-degree views. This innovation will help the company attract more customers and high-end tourists to New Zealand, as there is currently no similar technology available worldwide. It offers a safe way to explore and map remote locations without putting yachts, their owners, or crew members at risk. We are open to purchasing the final product once it becomes available on the market.

Additionally, we are ready to provide information and consulting support for the project during the testing phase.

Sincerely,

Rudee Lim
Business Development manager
